PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

DETAILED ACTION

Response to Arguments

1. The applicant asserts that the examiner's restriction was not proper or incomplete. The examiner disagrees. The examiner indicated which claims corresponded to a certain species. The election/restriction was done according to PCT Rule 13.1. The applicant did not properly elect. Claim 9 was addressed under the species election for claim 5. The examiner asserts that claims 10-13 were generic, therefore they were not included in the election/restriction. The examiner is maintaining the restriction.

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

For claim 1, the species are:

Species 1: claim 2

Species 2: claim 3

Species 3: claim 4

For claim 5 , the species are:

Species 1: claim 6

Species 2: claim 7

Species 3: claim 8

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

For claim 1, the species are:

Species 1: claim 2

Species 2: claim 3

Species 3: claim 4

For claim 5 , the species are:

Species 1: claim 6

Species 2: claim 7

Species 3: claim 8

Species 4: claim 9

The applicant needs to elect a species for each generic claim.

Art Unit: 2614

The following claim(s) are generic: Claims 1 and 5 are generic.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

4.

For generic claim 1,

claim 2 has a special technical feature of

the sound signal processing unit divides the speaker array into left and right

reproduction regions for reproducing a left channel and a right channel of a

stereo sound source or surround sound source the left and right reproduction

regions having the frequency band with a lowest passing frequency are located

at a central portion of the speaker array,

the left and right reproduction regions having the frequency band with the highest

passing frequency are located at increases from a central portion toward

opposite end portions of the speaker array, and

the number of speakers allocated to the left and right reproduction regions

decreases decreasing as the passing frequency of the frequency band increases.

Claim 3 has the special technical feature of wherein the sound signal processing

unit implements a signal processing manner so that a sound signal of a center

channel of the stereo sound source or surround sound source becomes non-

directional.

Claim 4 has the special technical feature of wherein the sound signal processing

unit left and right center channel reproduction regions that reproduces4hea

Art Unit: 2614

center channel of the stereo sound source or surround sound source the left and right center channel reproduction regions having the frequency band with the highest passing frequency are located at a central region of the speaker array, the left and right center channel reproduction regions having the frequency band with the lowest passing frequency are positioned farthest away from the left and right center channel reproduction regions having the frequency band with the highest passing frequency band increases from the opposite end portions to the central portion with, and the number of speakers allocated to the left and right center channel reproduction regions decreases as the passing frequency of the frequency band increases.

For generic claim 5,

Claim 6 has the special technical feature of 6. passing frequency band of the primary filter is divided into a high frequency band, a medium frequency band and a low frequency band, and the number of the speaker driving set to pass the high frequency, band smaller than the number the speaker driving circuits set to pass the low or medium frequency band.

Claim 7 has the special technical features wherein the passing frequency band of the primary filter increases from the speaker or speakers positioned at the central portion of the speaker array to the speakers positioned at the opposite end portions of the speaker array.

Claim 8 has the special technical feature of wherein the speaker driving circuits implement a signal processing so that a sound signal of a center channel of the stereo sound source or surround sound source becomes non-directional.

Claim 9 has the special technical feature of wherein each of the speaker driving circuits has a secondary that filters a sound signal of the center channel of the stereo sound source or surround sound source the passing frequency band of the secondary filter of each of the speaker driving circuits is set-seas to increase from the speakers positioned at a peripheral region of the speaker array opposite end portions to the speaker or speakers positioned at a central region central portion of the speaker array.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DEVONA E. FAULK whose telephone number is (571)272-7515. The examiner can normally be reached on 8 am - 5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vivian Chin can be reached on 571-272-7848. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
